Table showing Pij/Pj values

From the previous table we see that Pij values for any i is maximum for j = TOI. The Pij values follow the order of popularity(size of follower-base)

CDF for tweet sentiment for newspapers followers (irrespective of the no. newspapers they follow).

CDF for tweet sentiment for newspapers followers following only one newspaper. We see that these CDF's aren't as close as in the previous plot.

	Ni	Pi
All	12220214	1.00
BJP	10371874	0.85
INC	4765818	0.39

Pi values for BJP and Congress. All corresponds to the newspaper followers who follow any of the political party.

	BJP	INC
TOI	23.9	10.0
HT	26.9	14.0
HINDU	29.6	16.2
IE	34.7	20.1
NIE	32.7	21.5
TGI	41.9	42.5
DH	39.9	33.7

P_newspaper_BJP and P_newspaper_INC values in percentage.

	BJP	INC
TOI	0.50	0.41
HT	0.56	0.58
HINDU	0.61	0.67
IE	0.72	0.84
NIE	0.68	0.89
TGI	0.87	1.77
DH	0.83	1.40

Table showing
P_newspaper_BJP/P_BJP and
P_newspaper_INC /P_INC

Visualization of P_newspaper_BJP and P_newspaper_INC values

P_newspaper_BJP and P_newspaper_INC

We observe that probability of a user following BJP and INC given the newspaper increases as the no. followers of the newspaper decreases.
